

Student database application

Scenario: You are a database administrator for a university and need to create an application to manage student enrollment and balance.

Your application should do the following

- Ask the user how many new students will be added to the database
- The user should be prompted to enter the name and year for each student
- The Student should have 5-digit unique ID, with the first number being their grade level.

A student can enroll in the following courses:

- Is 3 history 101
- Mathematics 101
- English 101
- Chemistry 101
- Computer science 101

Each course cost \$600 to enroll

The student should be able to view their balance and pay the tuition.

To see the status of the student, we should see their name, ID, courses enrolled, and balance.
